

Special Issue of *Discrete Mathematics* devoted to

## Papers Presented at the 19th British Combinatorial Conference

Editorial Board: Douglas Woodall (Guest Editor)  
Francis Bell, Keith Edwards, Terry Griggs, Jan van den Heuvel  
and Stephanie Perkins (Associate Guest Editors)

### Information for Contributors

Papers for publication in this special issue should be submitted *in triplicate* to the local organizers not later than lunchtime on Wednesday 2nd July. Please note the following points:

- Only papers presented at the conference will be considered, one paper per talk. Papers should not have been submitted elsewhere.
- Each paper should be accompanied by an abstract and a list of keywords.
- The affiliations of all the authors should be included at the head of the paper.
- The full postal address of the corresponding author should be enclosed.
- Each author should be listed with all the initials that they usually use. (Thus D. R. Woodall might appear as Douglas R. Woodall, but not as Douglas Woodall. “For bibliographic purposes, people who throw away initials are a menace!”)
- The list of references should use standard *Math. Reviews* abbreviations for names of journals.
- Use “ or ‘, NOT ”, for open-quotes. (In  $\text{\TeX}$ , “ is two ‘ characters.)
- Conventionally, in Mathematics only single-letter names of variables are printed in italic. Thus the crossing number of  $G$  might be  $cr(G)$ , while  $cr(G)$  is  $c$  times its rank; and the transpose of  $A$  might be  $A^t$ , while  $A^t$  is its  $t$ th power.

Note that *Discrete Mathematics* does not publish conference proceedings as such, but only collections of journal-quality papers that happen to have been presented at conferences. We are required by the Editor-in-Chief of *Discrete Mathematics* to have each paper refereed by two referees to the normal standards expected in that journal. We hope that everyone who submits a paper will be willing, if asked, to act as a referee.

We aim to send the accepted papers to the Editorial Office of *Discrete Mathematics* in June 2004, in the hope that the volume will appear before April 2005. (For the record, the 17th BCC special issue appeared in March 2001, and the 18th BCC special issue in May 2003.) Almost inevitably, the processing of a small number of papers will be held up by delays on the part of the authors, editors or, most probably, referees. When this happens, for whatever reason, these delayed papers will not appear in the special issue, but they will continue to be processed and, if subsequently accepted, will appear in a regular issue of *Discrete Mathematics*. Authors are presumed to be aware of the possibility of this happening, and to agree to it, when they submit their papers.
